Retrieved 3D content can enter generation at different stages

A. Reference-conditioned generation (Phidias)

Input query

retrieved 3D reference

Reference-guided Diffusion

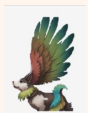

multi-view images

reconstruct

3D output

B. Retrieved initialization + score distillation (ReDream)

Input query

retrieved 3D reference

initialize

2D diffusion prior

Render views distill scores

optimize

3D output

Conceptual information flows; illustrative images do not represent comparative experimental results.
